

Utility Line Placement, Westminster Place

The sketch below depicts the approximate location of the gas, water and sewer lines in the 5000 – 5100 blocks of Westminster Place, St. Louis, MO.

- 1) These measurements are approximate, and do not represent permission to dig without proper markings.
- 2) The utility lines are not necessarily straight or parallel to the curbs for their entire length.
- 3) Placement of the electrical service for the street lights is covered by a separate document.
- 4) Anyone planning to dig in the area should be sure to carefully tell Missouri One Call the exact location. Late in May 2015, a request was placed for the location of lines prior to a dig to repair the gas service to 5045. The lines in front of 5045 were marked, but actually the dig site was to expose an old line connection across the street and no markings were placed there. The electrical lines were not marked at all.
- 5) Please advise me of any additions or corrections to this data so we can keep it up-to-date.

Thank you.
